

CPU-50 Water block (AMD/Intel Processor)
[06mm, 1/4in]

The CPU-50 was Koolance's first water block, initially sold with PC1-C systems. It was supplied with support for AMD socket 7, socket 462 (A), and Intel socket 370 processors. (Originally, it did not have a model number, but has retrospectively been called the "CPU-50".)
