

The CHC-25-L06 is a liquid cooler for Radeon 1800XL/XT, 1900XT/XTX, and 1950XT/XTX voltage regulator circuits. It replaces the rear "VREG" heat sink of these video cards when liquid cooling the main GPU (which removes the default air flow). This product is not compatible with the Radeon X1950Pro.

The CHC-25-L06 is an anodized aluminum block with rotational nickel-plated brass compression fittings. The cooler mounts via two threaded pegs that use the original heat sink mounting holes.
