

The CHC-37-L06 is for GeForce 7800/7900 GTX voltage regulator circuits. It is a high density copper block with rotational L-fittings and 24k gold plating inside and out. It replaces the rear "VREG" heat sink of 7800GTX and 7900GTX video cards when liquid cooling the main GPU (which removes the default air flow).

The CHC-37-L06 is not intended for 7800/7900 GT cards, which lack the same type of VREG components.

General	
Weight	0.40 lb (0.18 kg)
Materials	Gold-Plated Copper, Nickel-Plated Brass
