

COV-PMP450A is an acetal fitting base for the Koolance [PMP-450](#) and [PMP-450S](#) pumps (sold separately). Along with enabling the use of any G 1/4 BSPP (parallel) thread fitting style and diameter, it allows flow to be specifically directed for increased pump performance, or broader chassis integration.

An extremely flexible design permits inlet and outlet fittings (not included) to both be positioned on top, on the side, or perpendicular to one another. Fitting threading is G 1/4 BSPP. Mounting bolts for the pump, two G 1/4 BSPP socket plugs, and a rubber insulation pad are included.

General	
Weight	0.60 lb (0.27 kg)
Wetted Materials	Nickel-Plated Brass, POM Acetal, EPDM or Silicone
