

The Koolance CTR-SPD1224M uses voltage control to throttle speeds for 12V DC pumps or fans. With a jumper setting, it will also step-up and throttle voltage for 24V DC devices. A 12V DC input is required.

**CAUTION:** Do not operate components at voltages which exceed their specifications. Running a 12V-max pump at 24V from the speed controller can damage the pump. Do not connect devices which exceed the controller's maximum power rating (36W@12V, 50W@24V).
