

VID-NV2-L06 Water Block (NVIDIA GeForce 6800/7800 Video Card) [06mm, 1/4in]

Liquid cool your video chipset and memory! A revised version of Koolance's popular VID-NV1-L06, the VID-NV2-L06 works with a wider array of GeForce 7800 and 6800 cards, including: 7900GTX, 7800GT, 7800GTX, 6800, 6800LE, 6800GT, and 6800 Ultra in AGP, PCI-Express, and SLI configurations.

The VID-NV2-L06 will work on most 7900GT cards when not using an SLI bridge connector. It will also work on most GT, LE, Ultra, GS, and XT versions of the 6800. Please note the VID-NV2-L06 will not work with regular GeForce 6800, or 7800GS card.

Installation is simple, with 360-degree rotational fittings and a tool-less mounting bracket. The VID-NV2-L06 combines a gold-plated high density solid copper GPU cooler, and

anodized aluminum memory cooler.

NOTE: Be sure to grab some video RAM heat sinks if there are any rear modules (predominantly GeForce 6 series).
